Professional Summary

Frontend Developer with hands-on experience building production-ready web applications using React, Tailwind CSS, TypeScript, JavaScript, and Supabase. Developed full-stack projects featuring role-based access control, real-time data, and backend integration via Supabase (Auth, RLS, Edge Functions). Proficient in modern React patterns including TanStack Query, React Router v7 loaders, and feature-based architecture. Focused on clean, scalable front-end solutions and committed to continuous professional growth.

Projects

Zaki Chat (Support Chat) | Independent Project | April 2026

[React 19, TypeScript, Supabase, TanStack Query, React Router v7, Framer Motion, OneSignal] | [Live Demo](#) | [Source Code](#)

- **Description:** A full-stack real-time support chat system with dedicated Owner and User interfaces, supporting anonymous and authenticated sessions, live messaging, and seamless account management.
- **Role:** Architected a dual-role layout system (Owner / User) using React Router v7 with protected route guards and an AuthProvider backed by Supabase Anonymous Auth, allowing guest users to chat instantly and optionally upgrade to a persistent account for cross-device access. Implemented real-time messaging infrastructure using Supabase Realtime subscriptions with dedicated hooks (useMessagesRealtime, useConversationsRealtime) and paginated message history via TanStack Query's useInfiniteQuery for efficient data loading. Built message interaction features - copy, delete, and threaded reply - with animated feedback using Framer Motion. Developed a live presence system using a heartbeat mechanism (useHeartbeat) and UsersStatusContext to track and broadcast online/offline status in real time. Integrated OneSignal push notifications to deliver real-time message alerts to offline users.

Zaki Dashboard (Restaurant Management System) | Independent Project | March 2026

[React, Vite, Supabase, TanStack Query, Tailwind CSS, OneSignal, React Router v7] | [Live Demo](#) | [Source Code](#)

- **Description:** A full-stack restaurant management system designed to streamline operations through role-based access control, real-time data, and advanced order management features supporting operational tracking.
- **Role:** Designed and implemented a multi-role access control system (Owner / Admin / Cashier) using protected routes, Supabase RLS policies, and SECURITY DEFINER triggers for permission handling. Developed and integrated Supabase Edge Functions to support dashboard analytics, data aggregation, and role-based user management with secure token authentication. Implemented server-state management using TanStack Query with prefetch-in-loader and useQuery hybrid patterns to resolve caching inconsistencies. Built a client-side filtering system utilizing URL search parameters, debounced search, and multi-criteria filters including date range, employee, status, and payment method. Applied snapshot and denormalization strategies for order_items to ensure historical data integrity with optimized foreign key cascade rules. Integrated real-time push notifications using OneSignal with role-based targeting for order updates.

Loqma Eskndrany (E-Commerce Web Application) | Independent Project | February 2026

[React, CSS3, Axios, AppSheet, Google Sheets API] | [Live Demo](#) | [Source Code](#)

- **Description:** A modern e-commerce web application developed to replace a legacy system, enabling dynamic product management, streamlined order processing, and improved performance without requiring a traditional backend infrastructure.
- **Role:** Led migration from a legacy HTML/JavaScript codebase to React (Vite), restructuring the application into modular, reusable functional components. Implemented a no-backend content management solution using AppSheet and Google Sheets API to enable real-time inventory and pricing updates. Developed a client-side shopping cart integrated with WhatsApp API to automate order generation and submission without backend dependency. Built a responsive, mobile-first user interface optimized for performance, accessibility, and fast load times.

Professional Experience

Front-End Developer | Personal & Freelance Projects | October 2024 – Present

- Built and deployed full-stack web applications using React, TypeScript, Tailwind CSS, and Supabase (Auth, RLS, Realtime, Edge Functions).
- Managed server state with TanStack Query and handled routing with React Router v7 including protected routes and role-based access control.
- Deployed projects via Vercel, Netlify, and Cloudflare with GitHub CI/CD; used Git for version control and branching.

Skills

Soft Skills: Communication | Problem Solving | Self-Learning | Adaptability | Fast Learning

Technical Skills:

- **Frontend & UI:** React.js, React Router v7, Tailwind CSS 4.1, TypeScript, JavaScript (ES6+), HTML5, CSS3, Vite.
- **Backend & Data:** Supabase (Auth, RLS, Edge Functions, Realtime), TanStack Query, Axios, REST APIs.
- **Tools & Dev:** Git, GitHub, OneSignal, Performance Optimization, Vercel, Netlify, Cloudflare, Zod, React Hook Form, shadcn/ui, Radix UI, Motion (Framer Motion)

Education

Bachelor of Arts | Arabic Language Department

Alexandria University

Languages

Arabic | English
