Professional Summary

Frontend Developer with hands-on experience building production-ready web applications using React, Tailwind CSS, JavaScript, and Supabase. Developed full-stack projects featuring role-based access control, real-time data, and backend integration via Supabase (Auth, RLS, Edge Functions). Proficient in modern React patterns including TanStack Query, React Router v7 loaders, and feature-based architecture. Focused on clean, scalable front-end solutions and committed to continuous professional growth.

Skills

Soft Skills: Communication | Problem Solving | Self-Learning | Adaptability | Fast Learning.

Technical Skills:

- **Frontend & UI:** React.js, React Router v7, Tailwind CSS 4.1, JavaScript (ES6+), HTML5, CSS3, Vite.
- **Backend & Data:** Supabase (Auth, RLS, Edge Functions, Realtime), TanStack Query, Axios, REST APIs.
- **Tools & Dev:** Git, GitHub, OneSignal, Performance Optimization, Vercel, Netlify.

Projects

Zaki Dashboard | Restaurant Management System | Independent Project | March 2026

[React, Vite, Supabase, TanStack Query, Tailwind CSS, OneSignal, React Router v7] | [Live Demo](#) • [Source Code](#)

- **Role-Based Access Control:** Architected a multi-role system (Owner / Admin / Cashier) with protected routes, Supabase RLS policies, and a SECURITY DEFINER trigger pattern to manage permission conflicts.
- **Backend Integration:** Built and consumed Supabase Edge Functions for dashboard stats aggregation and role-aware user management, with Bearer token authentication.
- **Server State Management:** Migrated to TanStack Query using a prefetch-in-loader + useQuery hybrid pattern with query options factories, resolving stale cache issues across user sessions.
- **Orders & Filtering System:** Built a client-side filtering UI with URL search params (useSearchParams), debounced search, and filters for date range, employee, status, and payment method.
- **Data Architecture:** Adopted a snapshot/denormalization pattern for order_items to preserve historical order data after item deletion, with FK cascade policies tuned per table.
- **Real-Time Notifications:** Integrated OneSignal push notifications for order updates with role-based targeting.

Loqma Eskndrany | E-Commerce Web Application | Independent Project | February 2026

[React, CSS3, Axios, AppSheet, Google Sheets API] | [Live Demo](#) • [Source Code](#)

- **Modernization & Migration:** Architected the migration of a legacy HTML/JS site to React (Vite), refactoring the codebase into reusable functional components and optimizing performance.
- **Dynamic CMS Integration:** Implemented a "No-Backend" administrative solution using AppSheet and Google Sheets, enabling non-technical clients to manage inventory and pricing in real-time.
- **Custom Checkout Flow:** Developed a client-side cart system with a seamless WhatsApp API integration, automating order formatting and dispatching, which eliminated the need for a dedicated backend server.
- **Responsive UI/UX:** Built a high-performance, mobile-first interface, ensuring accessibility and fast load times for end-users.

Professional Experience

Front-End Developer | Personal & Freelance Projects | October 2024 - Present

- Integrated Supabase as a backend-as-a-service solution, implementing authentication, row-level security policies, real-time subscriptions, and serverless Edge Functions.
- Built responsive and interactive web applications using HTML, CSS, JavaScript, React.js, and Tailwind CSS.
- Developed a personal portfolio and an e-commerce web application from scratch using React (Vite), React Router, and modern component-based architecture.
- Implemented responsive layouts with Tailwind CSS, Flexbox, and CSS Grid to ensure cross-device compatibility.
- Designed reusable and scalable React components and organized project structure for maintainability.
- Managed application state using React Hooks (useState, useContext, useEffect, useMemo, useRef), Custom Hooks.
- Integrated REST APIs using Axios to handle dynamic data fetching and user interactions.
- Deployed projects using Vercel and Netlify with GitHub CI/CD integration.
- Used Git and GitHub for version control, branching, and collaborative workflow.
